

INSTALLATION OF THE EMD-2 (911060-067) INTO THE M-48 FULL FACE MASK

1. Place the mask and EMD-2 in front of you.
2. Remove the pod from the M-48 mask.
3. Locate the left microphone port on the M-48 mask.

4. Using a sharp Exacto™ knife or scissors, very carefully cut away and remove the center portion of the microphone port.

5. Install the mic into the mic port. (The mic will appear to be too large, but the seal easily stretches.)
6. Pull the mic and mic port into place. The mic will end up in the corner of the mouth. Ensure the mic mount is fully inserted into the mask port.

Continued on p. 2

7. Install a large tie wrap, ensuring that the end will not be touching the diver's face.

8. Feed the M-48 harness straps through the EMD-2 earphone holders and adjust the position of the earphones. The arrow on the OTS logo should be pointing downward; the snap faces forward, toward the mask. *Note: If you remove the earphones from the holders, the soft, shiny side faces toward the ear.*

9. Bend the pod area away from the mask and run the earphone cable through the groove between the pod area and mask. It should fit snugly into the groove.

10. Adjust the mic to the correct position. The mic must be less than 1/4" from the diver's lips and must clear the side of the mouthpiece. Reposition the mic as needed to the side of the mouth. Reinstall the pod.
